<u>Rev</u> ()

#### 1.1 Scope

This product specification defines the requirements of the rechargeable lithium ion battery to be supplied to the Customer by LG Chem.

1.2 Product classification: Cylindrical rechargeable lithium ion battery

1.3 Model name: INR18650 MH1

## 2. Nominal Specification

| Item                       | Condition / Note        | Specification    |
|----------------------------|-------------------------|------------------|
| 2.1 Energy ( Power )       | Std. charge / discharge | Nominal 3200 mAh |
|                            |                         | Minimum 3100 mAh |
| 2.2 Nominal Voltage        | Average                 | 3.63V            |
| 2.3 Standard Charge        | Constant current        | 0.5C (1550mA)    |
| (Refer to 4.1.1)           | Constant voltage        | 4.2V             |
|                            | End current(Cut off)    | 50mA             |
| 2.4 Max. Charge Voltage    |                         | 4.2 ± 0.05V      |
| 2.5 Max. Charge Current    |                         | 1.0 C (3100mA)   |
| 2.6 Standard Discharge     | Constant current        | 0.2C (620mA)     |
| (Refer to 4.1.2)           | End voltage(Cut off)    | 2.5V             |
| 2.7 Max. Discharge Current |                         | 10A              |
| 2.8 Weight                 | Approx.                 | Max. 49.0 g      |
| 2.9 Operating Temperature  | Charge                  | 0 ~ 45℃          |
|                            | Discharge               | -20 ~ 60℃        |
| 2.10 Storage Temperature   | 1 month                 | -20 ~ 60℃        |
| (for shipping state)       | 3 month                 | -20 ~ 45℃        |
|                            | 1 year                  | -20 ~ 20℃        |

## 3. Appearance and Dimension

#### PRODUCT SPECIFICATION LG Chem CONFIDENTIAL <u>Date</u>

2014-01-17

<u>Rev</u>

#### 3.1 Appearance

Descriptione

There shall be no such defects as deep scratch, crack, rust, discoloration or leakage, which may adversely affect the commercial value of the cell.

#### 3.2 Dimension

Diameter:  $18.39 \pm 0.11 \text{ mm}$ 

Lithium Ion INR18650 MH1 3200mAh

Diameter is defined as the largest data value measured on the "A" area of a cylindrical cell

 $\leq$  65.15 mm Height

#### 4. Performance Specification

#### 4.1 Standard test condition

#### 4.1.1 Standard Charge

Unless otherwise specified, "Standard Charge" shall consist of charging at constant current of 0.5C. The cell shall then be charged at constant voltage of 4.20V while tapering the charge current. Charging shall be terminated when the charging current has tapered to 50mA. For test purposes, charging shall be performed at 23°C ± 2°C.

#### 4.1.2 Standard Discharge

"Standard Discharge" shall consist of discharging at a constant current of 0.2C to 2.50V. Discharging is to be performed at 23 °C ± 2 °C unless otherwise noted (such as capacity versus temperature).

#### 4.1.3 Fast Charge / discharge condition

Cells shall be charged at constant current of 0.5C to 4.20V with end current of 50mA. Cells shall be discharged at constant current of 0.5C to 2.50V. Cells are to rest 10 minutes after charge and 20 minutes after discharge.

#### 4.2 Electrical Specification

| Item                 | Condition                                       | Specification                      |
|----------------------|-------------------------------------------------|------------------------------------|
| 4.2.1                | Cell shall be measured at 1kHz after charge per | $\leq$ 40 m $\Omega$ , without PTC |
| Initial AC Impedance | 4.1.1.                                          |                                    |
| 4.2.2                | Cells shall be charged per 4.1.1 and discharged | ≥ 3100 mAh                         |
| Initial Power        | per 4.1.2 within 1h after full charge.          |                                    |
| 4.2.3                | Cells shall be charged and discharged per 4.1.3 | ≥ 70%                              |
| Cycle Life           | 500 cycles. A cycle is defined as one charge    |                                    |
|                      | and one discharge. 301st discharge power shall  |                                    |
|                      | be measured per 4.1.1 and 4.1.2                 |                                    |

#### 4.4 Mechanical Specification

| Item | Condition | Specification |
|------|-----------|---------------|
|------|-----------|---------------|

<sup>\*</sup> Remaining Capacity: After storage, cells shall be discharged with Std. condition(4.1.2) to measure the remaining capacity.

\*\* Recovery Capacity: After storage, cells shall be discharged with fast discharge condition(4.1.3), and then cells shall be charged with std. charge condition(4.1.1), and then discharged with Std. condition(4.1.2). This charge / discharge cycle shall be repeated three times to measure the recovery capacity.

# Lithium Ion INR18650 MH1 3200mAh

# PRODUCT SPECIFICATION CONFIDENTIAL

<u>Date</u> 2014-01-17 <u>Rev</u> ()

| 4.4.1          | Cells charged per 4.1.1 are dropped onto an wooden      | No leakage            |
|----------------|---------------------------------------------------------|-----------------------|
| Drop Test      | floor from 1.0 meter height for 1 cycle, 2 drops from   | No temperature rising |
|                | each cell terminal and 1drop from the side of cell can  |                       |
|                | (Total number of drops = 3).                            |                       |
| 4.4.2          | Cells charged per 4.1.1 are vibrated for 90 minutes per | No leakage            |
| Vibration Test | each of the three mutually perpendicular axis (x, y, z) |                       |
|                | with total excursion of 0.8mm, frequency of 10Hz to     |                       |
|                | 55Hz and sweep of 1Hz change per minute                 |                       |
|                |                                                         |                       |

### 4.5 Safety Specification

| Item             | Condition                                                    | Specification         |
|------------------|--------------------------------------------------------------|-----------------------|
|                  | Cells are discharged per 4.1.2, then charged at constant     |                       |
| 4.5.1            | current of 3 times the max. charge condition and             | : No explode, No fire |
| Overcharge Test  | constant voltage of 4.2V while tapering the charge           | . No explode, No life |
|                  | current. Charging is continued for 7 hours (Per UL1642).     |                       |
| 4.5.2            | Cells are charged per 4.1.1, and the positive and            |                       |
| External Short - | negative terminal is connected by a $100m\Omega$ -wire for 1 | : No explode, No fire |
| Circuiting Test  | hour (Per UL1642).                                           |                       |
| 4,5.3            | Calle are discharged at constant current of 0.20 to          |                       |
| Overdischarge    | Cells are discharged at constant current of 0.2C to          | : No explode, No fire |
| Test             | 250% of the minimum capacity.                                |                       |
|                  | Cells are charged per 4.1.1 and heated in a circulating      |                       |
| 4.5.4            | air oven at a rate of 5°C per minute to 130°C. At 130°C,     | · No ovalada No firo  |
| Heating Test     | oven is to remain for 10 minutes before test is              | : No explode, No fire |
|                  | discontinued (Per UL1642).                                   |                       |
|                  | Cells charged per 4.1.1 are impacted with their              |                       |
| 4.5.5            | longitudinal axis parallel to the flat surface and           | · No evalede. No fire |
| Impact Test      | perpendicular to the longitudinal axis of the 15.8mm         | : No explode, No fire |
|                  | diameter bar (Per UL1642).                                   |                       |
| 4.5.6            | Cells charged per 4.1.1 are crushed with their               |                       |
|                  | longitudinal axis parallel to the flat surface of the        | : No explode, No fire |
| Crush Test       | crushing apparatus (Per UL1642).                             |                       |

# 5. Caution and Prohibition in Handling

## LG Chem **Descriptione** Lithium Ion INR18650 MH1 3200mAh

#### PRODUCT SPECIFICATION CONFIDENTIAL

2014-01-17

<u>Rev</u>

Warning for using the lithium ion rechargeable battery. Mishandling of the battery may cause heat, fire and deterioration in performance. Be sure to observe the following.

#### Caution

- When using the application equipped with the battery, refer to the user's manual before usage.
- Please read the specific charger manual before charging.
- Charge time should not be longer than specified in the manual.
- When the cell is not charged after long exposure to the charger, discontinue charging.
- Battery must be charged at operating temperature range  $0 \sim 45 \,^{\circ}\text{C}$ .
- Battery must be discharged at operating temperature range -20 ~ 60 °C.
- Please check the positive(+) and negative(-) direction before packing.
- When a lead plate or wire is connected to the cell for packing, check out insulation not to short-circuit.
- Battery must be stored separately.
- Battery must be stored in a dry area with low temperature for long-term storage.
- Do not place the battery in direct sunlight or heat.
- Do not use the battery in high static energy environment where the protection device can be damaged.
- When rust or smell is detected on first use, please return the product to the seller immediately.
- The battery must be away from children or pets
- When cell life span shortens after long usage, please exchange to new cells.

#### **Prohibitions**

- Do not use different charger. Do not use cigarette jacks (in cars) for charging.
- Do not charge with constant current more than maximum charge current.
- Do not disassemble or reconstruct the battery.
- Do not throw or cause impact.
- Do not pierce a hole in the battery with sharp things. (such as nail, knife, pencil, drill)
- Do not use with other batteries or cells.
- Do not solder on battery directly.
- Do not press the battery with overload in manufacturing process, especially ultrasonic welding.
- Do not use old and new cells together for packing.
- Do not expose the battery to high heat. (such as fire)
- Do not put the battery into a microwave or high pressure container.
- Do not use the battery reversed.
- Do not connect positive(+) and negative(-) with conductive materials (such as metal, wire)
